ENHANCE THE MOMENT

Opening a bottle is a moment of meeting. All our efforts are devoted to this moment. We want to make it unique. And perfect.

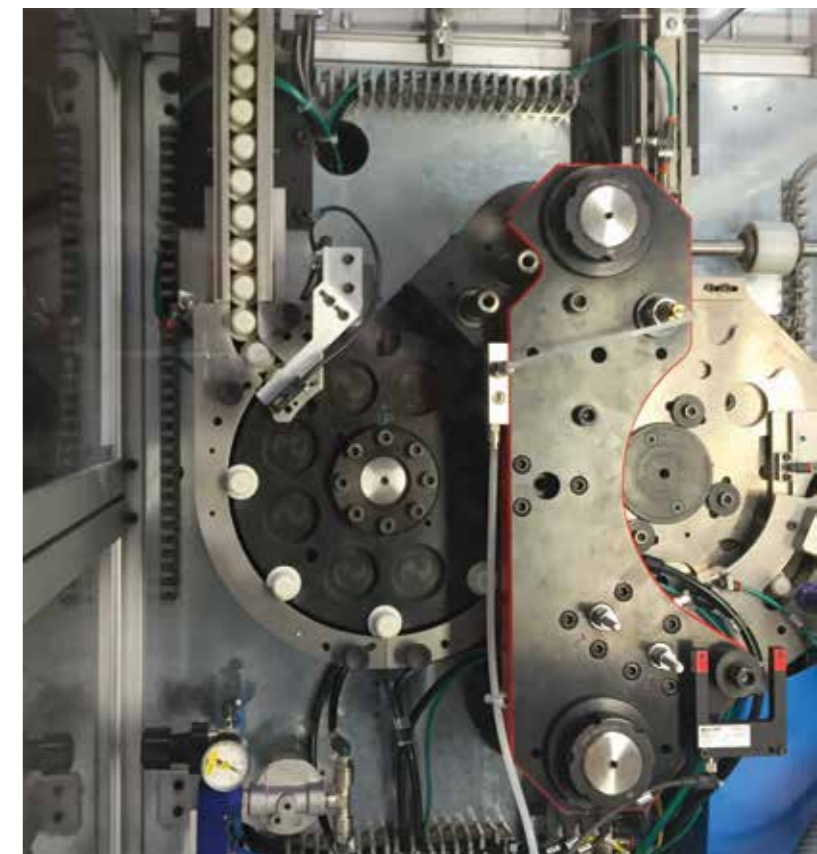

WE ARE FORM AND FUNCTIONALITY

We conceive of the right closure as the essence of form, functionality, attention. We aim for efficient beauty. And we take it one step further, applying our expertise and offering unique solutions.

EXPERTISE TECHNOLOGY INNOVATION

The know-how we've gained over more than four decades, allows us to manage each manufacturing phase with mastery, always bearing in mind that each stopper is unique.

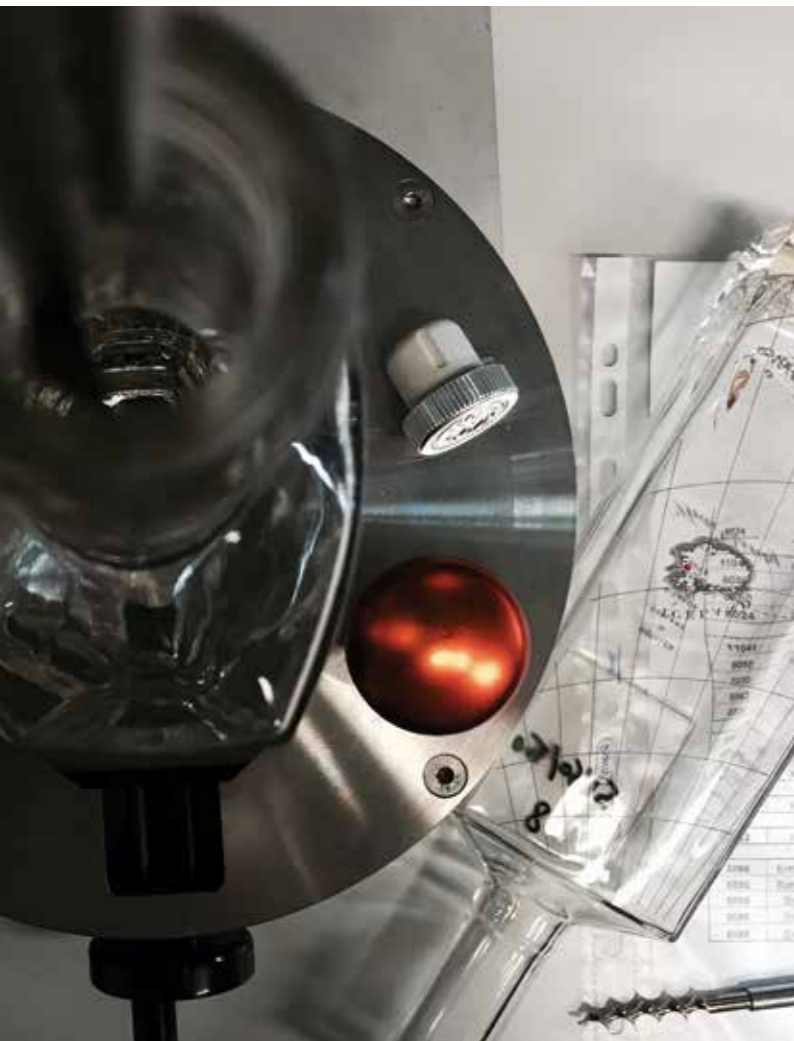

ITALIAN

A lot of pride goes into designing and producing our closures in Italy. For us, Made in Italy is not just a motto, but a mission, a way of being and doing. Each and every product, project, and idea is Italian, like us.

DESIGN, D.VISION

Are you looking for Design? D.vision is the answer. D.vision is Labrenta's creative and practical core, representing the convergence of form and functionality.

VALIDATION PROCESS

The "validation process", or the analysis process we've been perfecting over 45 years of activity, is our trade-mark. We strive to supply not just stoppers that work, but customized stoppers that work for you.

NETWORK

Thanks to exclusive partnerships with our distributors and agents, we maintain contacts in all corners of the globe and are organized to satisfy worldwide requests.

VALIDATION Process Beyond Performance

3. PERFILAB

Centesimal analysis inside the neck of the container in order to validate compliance with tolerances and that there is no ovalization.

4. POP UP TEST

This is a thermal test designed to prevent the stopper from popping up when exposed to high temperatures (i.e. pop-up effect)

5. LEAKING TEST - LEAKING STRESS

Static evaluation of liquid leakage using specific simulants under different temperature conditions. Dynamic evaluation of leakage when the product is being handled/or under stressful conditions.

1. DATABASE CROSSING

All of the data we receive from our customers is analysed, evaluated and checked against the records in our database, built on over 40 years of experience.

6. CLIMATIC STRESS TEST

Behavioural analysis of the product under different climatic conditions (temperature 40°C to -10°C and humidity 70%), projected ageing with climate-controlled chamber.

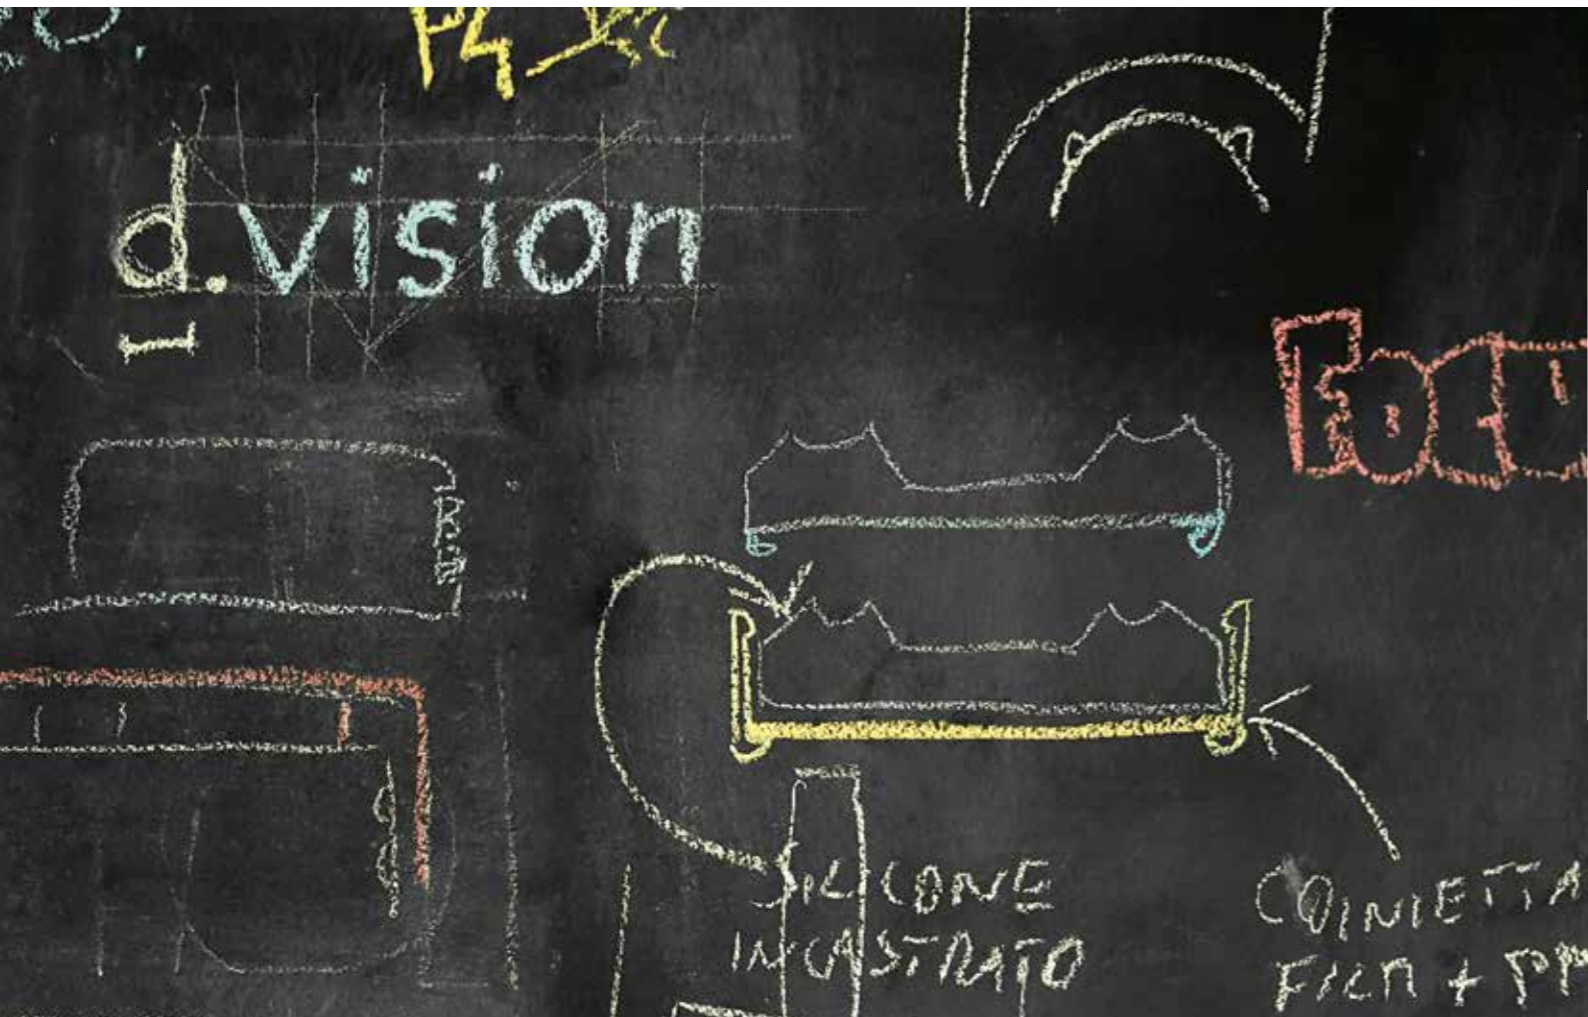

2. VOLUMETRIC ANALYSIS

This involves checking the characteristics of the container and the suitability of the air chamber.

7. PUT IN - PUT OUT

Checking the suitability of the insertion/corking force (put in) and the extraction/uncorking force (put out).

D.vision IF YOU CAN IMAGINE IT, WE CAN DO IT

START IMAGINING

D.vision is much more than an R&D office. It is the creative and practical soul of Labrenta. Whether it is the development of a new project, or transforming your intuitions into realities, D.vision will do it. With style. And technology.

THINK OF THE SHAPE

The shape of the closure tells who you are. It can speak volumes about your Brand and convey the essence of your product. D.vision will stand by your side, step by step, in the creation of a unique closure. Yours alone.

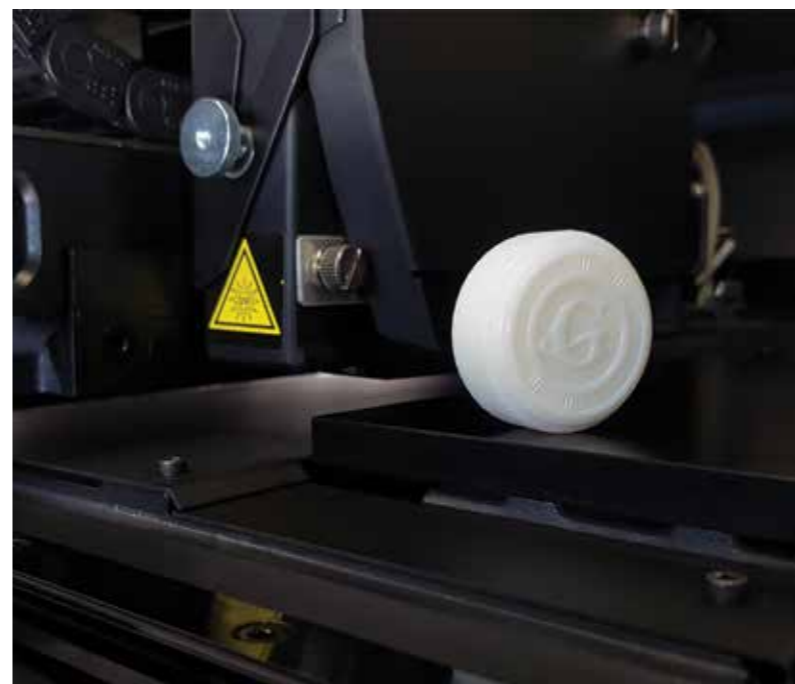

SELECT THE MATERIAL

Smooth and elegant aluminium, the warmth of traditional wood, or modern and versatile plastic. Or even glass, innovative gravitene, or zamak. Choose your materials and combine them as you prefer. D.vision is capable of moulding any material. For you.

PLAY WITH COLOUR

When it comes to colour, even the most subtle of shading can be important. Colour, above all, is emotion.

RAPID PROTOTYPING

Why wait to see your projects become a reality? Our internal 3D printer is of the latest generation, making it possible for you to touch your product in the snap of a finger.

T-shape **Wood**

rectangular

Wood is both nature and tradition. Our collection of wooden closures will add a touch of class to your product. Choose from among the infinite forms and customizations to create your closure together with us.

NO GLUE
SYSTEM

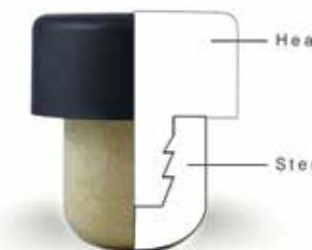

- glue = **UNBREAKABLE**

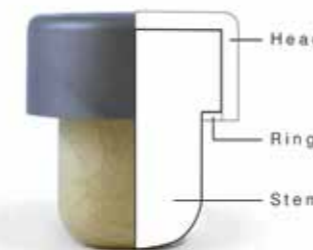

COUPLING

For NGS Coupling items, the stem is fitted dry. The peg is specially designed to fit perfectly into the seating of the stem, thus preventing it from falling out. A sophisticated anti-rotation system ensures that the stem remains firmly aligned with the head.

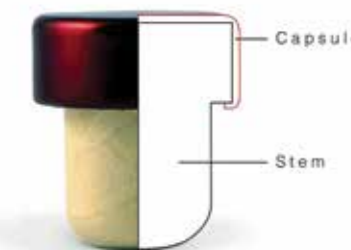

ULTRASOUND

Ultrasound is a welding system that uses ultrasounds. This system makes it possible for the stem, whether it is made of synthetic material or cork, to be joined to the head thanks to a ring that is ultrasound welded to the base of the head itself. In this way, the head and stem form an inseparable shell.

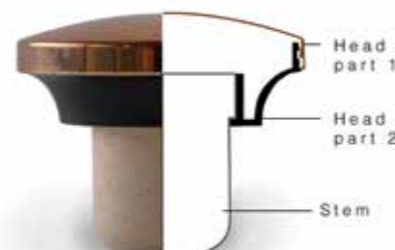

BEADING

With the Beading system, the head of the stopper is edged with a metal cover. This process ensures that the two materials are inseparable.

SNAP-FIT

Labrenta's latest innovation: NGS. The head and stem fit together perfectly.

SUGHERA

Welcome to the future of tradition

THE FIRST CORK CLOSURE WITH NO GLUE AT ALL

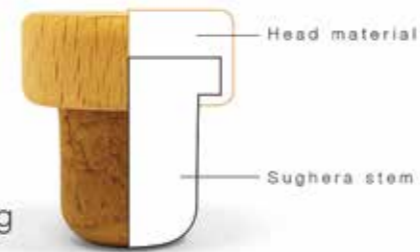

Sughera is the evolution of traditional closures for spirits. Welcome to the future of tradition.

NO GLUE IN

Sughera is the first closure with cork bound without the use of glues, thanks to the use of a special agglomerating agent.

NGS
NoGlue
System
assembling

AND OUT

Sughera also has no glue on the outside. The Sughera stem can be assembled at the head of the closure with the No Glue System - or NGS.

EXTREMELY STRONG

Sughera is incredibly resistant, preventing problems like the detachment of the head and the crumbling of the stem.

SAFE

The fine grain of the cork that makes up the Sughera is perfectly sanitized. This process also prevents contamination by colour and dusts.

COSTUMIZABLE

Any head can be used with your Sughera stem. Wood, Plastic, Aluminium. Or full sughera.
